

AI WeatherWise API

AI WeatherWise API is a weather intelligence service that provides real-time weather data, forecasts, alerts, and AI-driven recommendations for users and applications.

Key Features

- Real-time weather conditions
- Hourly and 7-day forecasts
- Severe weather alerts
- Air quality information
- Location-based weather insights
- AI-powered recommendations (travel, agriculture, outdoor activities, energy optimization)

Base URL

`https://api.weatherwise.ai/v1`

Authentication

Authorization: Bearer YOUR_API_KEY

Endpoints

1. Current Weather

GET /weather/current?city=London

`{"city": "London", "temperature": 18, "humidity": 72, "windSpeed": 12, "condition": "Cloudy"}`

2. Weather Forecast

GET /weather/forecast?city=London&days=7

3. Weather Alerts

GET /weather/alerts?city=London

4. AI Recommendations

GET /ai/recommendations?city=London

`{"recommendation": "Carry an umbrella today. Rain probability is 85% between 2 PM and 6 PM."}`

Example Use Case

A mobile weather application can use the AI WeatherWise API to retrieve current weather conditions, display hourly forecasts, notify users of severe weather events, and generate personalized activity recommendations using AI.

Benefits

- Accurate weather insights

- AI-enhanced decision support
- Easy RESTful integration
- Scalable cloud architecture
- Real-time alerts and notifications

AI WeatherWise API combines meteorological data with artificial intelligence to deliver smarter weather predictions and actionable recommendations.
